

# CARPET MASK BULLETIN

## TO ALL CONTRACTORS:

Flooring Resources Corporation does not recommend the use of any form of “Carpet Mask.” Most manufacturers advise against these products due to the adhesive residue left on the carpet which may attract soil over time.

Carpet Mask products when adhered directly to the carpet surface may cause soil, and also may affect the drying time of adhesives, cause discoloration, bubbling, and seam separation.

Flooring Resources Corporation recommends using Kraft Paper and/or Tempered Masonite to protect newly installed carpet.

Thank you for your cooperation with this matter. Do not hesitate to contact Flooring Resources Corporation with questions or concerns.
